

Company Environmental Statement 2022

Like most professional and conscientious companies, we are trying to deliver our services not only in an economic and professional way but in environmental assistive way.

To this end we have introduced working practices and reviewed our supply chain to ensure we have a uniform approach to such environmental matters.

Below is a list of what we have implemented to date, and we are open to suggestions and advice to improve.

1/ All BMK company owned/leased **vans** are of the most efficient and environmentally friendly EURO6 engine designs.

When suitable battery vans become available in load capacity and milage range we will adjust over our fleet over to these.

2/ BMK have 2 fully electric company vehicles which transport personnel.

3/ All BMK company vans are registered for waste transport under the Waste (England and Wales) regulations 2011.

4/ Personnel are encouraged (where possible and practical) to use public transport not only from home to site but between sites, including hire of Bikes /E scooters. To assist in the encouragement of this the company reimburses staff with all costs of such travel.

5/ All company waste is handled by our Waste partner Lawmans Ltd who are fully accredited with SKArating/BREEAM/fitwell and most UK accreditations. A full waste environmental report is available on larger projects which shows the impressive lengths of recycling achieved.

6/ Personal site waste is not just placed in one "bin" staff are trained to segregate waste and dispose in correct sorting bins. Where a site does not have that facility or it's a small project then recyclable waste (food packaging/bottles/glass etc) are taken home by the employee to be disposed of in their household disposal regime .

7/ All suppliers/wholesalers in our supply chain are major brand companies who are at the forefront of sourcing environmentally sourced materials and have solid environmental policies on their web sites.

Our largest and most frequent suppliers are as below with links to their environmental policies.

Travis Perkins <https://www.travisperkins.co.uk/content/environmental-policy>

Rexcel <https://corporate.rexel.co.uk/our-commitments/environmental-performance/>

City Plumbing <https://www.cityplumbing.co.uk/Environmental-Policy>

Selco <https://www.selcobw.com/info/sustainability-at-selco>

In particular we are committed to sourcing our timber responsibly, which is why the majority is responsibly sourced. We work with a supply chain that as a minimum operate within the two main standards for well-managed timber certification: the Forest Stewardship Council® (FSC®) and the Programme for the Endorsement of Forest Certification™ (PEFC™), to make sure our timber has full Chain of Custody (COC) certification.

8/ We are at the forefront of all new technology and some 15 years ago were one of the first accredited ECODAN air source heat pump installers in London. Things have moved on from then, but we provide a engineering advisory and assistive service to our clients in all such environmental matters and selection and operation of their building services.

Always looking to improve and fine tune
